

ABSTRACT OF THE DISCLOSURE

A stroller has front legs and rear legs. Right and left connecting bars connect the front legs and the rear legs, and form a seat support. L-shaped basket-holding rods are connected to rear ends of the connecting bars.

5 Bent rear ends of the right and the left basket-holding rods are disposed opposite to each other and are spaced apart from each other. A rear part of an upper edge of a carrier basket is connected to the basket-holding rods.
